## EDUCATION

### University Of Illinois at Chicago

Dec 2026

Bachelors of Engineering, Computer Science

- **GPA:** 4.0
- **Coursework:** Computer Design, Data Structures, Program Design Two, Mobile App Development, Programming Practicum, Discrete Math, Multivariable Calculus, Software Development, Algorithms, Software Design, Software Engineering

## SKILLS

- **Programming Languages:** Python, C++, Java, React.js, React Native, TypeScript, Django, Flask, JavaScript, C, Next.js, Ruby, Go
- **Frameworks & Tools:** Spring Boot, SQL, Node.js, Express.js, REST APIs, HTML, CSS, MongoDB, Git, Github, gRPC, Docker

## WORK EXPERIENCE

### Google, LLC

May 2025 - Aug 2025

Associate Software Developer Intern

Mountain View, CA

- Architected a scalable and performant error logging system for Google Ads rejected conversions to trace and quickly diagnose errors across non-replayable user conversion traffic in **C++** reducing on-call engineers' debug time by 100%.
- Validated system outputs in both staging and production environments through comprehensive suite of **unit, functional, regression tests** and **SQL** queries, ensuring system stability under 18M global QPS revenue-critical traffic.
- Collaborated in daily stand-ups and participated in peer code reviews to align on deliverables and enforce **SOLID** design principles, ensuring high-quality, maintainable code throughout the development lifecycle.
- Composed two in-depth technical **design documents** detailing system architecture, implementation strategies, scalable features, and future expansion paths.

### Google, LLC

May 2024 - Aug 2024

Associate Software Developer Intern

San Francisco, CA

- Engineered a high-performance multi data-processing **C++** pipeline using Google's internal tools to extract data about fraudulent Google Fi users, reducing real time latency by 90 percent and blocking 17% of active fraud users.
- Integrated robust **data validation** techniques by crafting unit testing tools and configuring an alert system that maintained data integrity and supported operational reliability for every hourly run of the pipeline.
- Documented detailed technical design specifications outlining system architecture, assessed tradeoffs between **design patterns**, and identified future scaling opportunities in collaboration with cross-functional teams.
- Designed an interactive data visualization dashboard using **SQL** to track key metrics for the pipeline, collaborating with team engineers and product managers to visualize and manually validate the product outputs.

### Acorn Genetics

Sep 2022 - Jan 2023

Frontend Developer Intern

Chicago, IL

- Developed a responsive landing page using **React.js** and **Next.js**, enhancing user engagement by improving page load speed by 35% and supporting scalable, user-centric design.
- Modernized the **UI/UX** design by migrating 100% of the existing frontend codebase from **Python** to **React.js**, thereby increasing maintainability and developer efficiency, and demonstrating proficiency in agile iterative development.
- Researched and implemented frontend best practices to simplify the codebase, reducing complexity by 25% and facilitating a reliable multi-tier scalable application environment.

## PERSONAL PROJECTS

### Commuter Connect

Jan 2025 - May 2025

- Programmed multiple **RESTful APIs** in **Python (Flask)** to power a username autofill using a Trie data structure and shortest path computations via Dijkstra's algorithm to improve computational runtime for a full-stack backend web application.
- Implemented a secure **Firebase** database integrated with **OAuth2** user authentication, optimizing user data management and reducing authentication latency by 25%. Utilizing **Github** for cross team collaboration.
- Optimized and tested **Python API** routes using Postman for seamless integration with the **TypeScript** frontend to improving real-time responsiveness and improve user experience; implementing Docker to enable portable and consistent deployment.

## EXTRACURRICULAR

### Women in Computer Science

May 2025 - Present

Developer Lead

- Mentored a team of 20 university students to design and develop a **full-stack** website for a Chicago small business using **Astro.js**, **Node.js**, **Express.js** and **Mongodb** strengthening WiCS's community outreach and local impact.
- Lead student engagement in technical interview preparation sessions by organizing and hosting school-wide LeetCode events, teaching **algorithmic problem-solving** strategies to a diverse group of peers.
